Summary

Frontend Engineer with 4+ years of experience building and modernizing customer-facing AWS consoles. Strong background in React, TypeScript, JavaScript, AWS, frontend architecture, testing infrastructure, and performance optimization, with experience leading cross-team initiatives and modernizing mature codebases.

Technical Skills

Languages: TypeScript, JavaScript, Python, C#, SQL, HTML, CSS

Frontend: React, Redux, Cypress, Jest, React Hook Form

AWS & Infrastructure: CloudWatch, CDK, CodePipeline

Engineering: CI/CD, Frontend Architecture, E2E Testing, Performance Optimization, Accessibility, Internationalization, AI-Assisted Development, Agile Development

Experience

Amazon Web Services (AWS)

2022 – Present

- *Frontend Engineer II – Direct Connect Console*
 - o Owned end-to-end frontend delivery for AWS Interconnect, building customer-facing Multicloud and Last Mile Cloud Connectivity experiences from scratch, including workflows, resource management, and API integrations.
 - o Drove modernization of a mature console by migrating React 16 → 18, reducing build time from 24 minutes to 4 minutes (83%).
 - o Fixed a race condition that fired API calls to inaccessible regions, eliminating invalid-region 4xx errors (~180K/hour to 0).
 - o Owned accessibility remediation for 107+ audit findings, resolving all high-severity violations and implementing scalable accessibility and internationalization improvements.
 - o Led BGP Insights delivery, building a filterable and paginated BGP Routes experience and driving testing, UX review, rollout, and launch across multiple global AWS regions, including China.
- *Frontend Engineer II – Fault Injection Service Console*
 - o Led a large-scale refactor of the experiment-template creation workflow to React Hook Form, replacing 4+ years of tightly coupled state management with centralized, type-safe validation.
 - o Took ownership of the Safety Lever launch with only 2 weeks of runway, driving the operational readiness review, feature sign-off, change management, UX approval, E2E testing, and rollout to completion ahead of the deadline.
 - o Identified a deployment monitoring gap where a bad change could finish deploying before its alarm could fire, and implemented bake-time alarm coverage across staging and production to enable automatic rollback throughout the full bake period.
- *Frontend Engineer I – SageMaker JumpStart*
 - o As one of two frontend engineers, built core SageMaker JumpStart experiences for the organization's migration from a monolithic frontend to micro-frontends, including model discovery, hub/model pages, search, sorting, filtering, and reusable UI components shared across the SageMaker organization.
 - o Designed a regionalized integration-test client that dynamically selects available models, root-causing an SDK compilation issue that several senior engineers had been unable to resolve and

- coordinating compatibility changes across 5+ partner teams; the change saved dozens of developer hours by preventing recurring test failures.
- Automated Hugging Face model URL validation during metadata generation, using Python multithreading and caching to reduce validation time from 1.5 minutes to 5 seconds and eliminate a recurring manual process.

Garmin - AeroData

May 2021 – Dec 2021

Software Engineer Intern

- Developed an ASP.NET Core MVC application to exercise an existing enterprise library and extended Log4Net-based logging with TCP serialization/deserialization.

Projects

3D Action RPG Prototype

Godot/C#

2024 – Present

- Built modular character, combat, state-machine, navigation, animation, hit-reaction, blocking, dodging, and enemy-AI systems for a 3D action RPG prototype.

Education

B.S. Computer Science, Arizona State University · Game Development Certificate · Minor in Japanese
